

User Evaluation

Team 1

1. DataModel

Peeranat : unavailable to evaluate, their server undeploy.

Siraj : i have visited the site of Web1 group but i have not find their term project. The site have some link about some problem solution...Therefor i am unable to evaluate their project.

Yemini : It seems like their project hasnt been uploaded yet.

2. Authenticate system

Peeranat : unavailable to evaluate, their server undeploy.

Siraj : The web site is unavailable however i have visited problem solution 4 which have the authentication procedure but i am not able to login to system due some internal error..

Yemini :

3. Design

Peeranat : unavailable to evaluate, their server undeploy.

Siraj : The web site is not available therefor i am not able to evaluate ..

Yemini :

4. Usability as proposed?

Peeranat : unavailable to evaluate, their server undeploy.

Siraj : The main page of the web site is simple but i will be happy to apply some style sheets. However their project in not available to evaluate.

Yemini :

Team 10

1. DataModel

Peeranat : Their model that had posted in http://web10.cs.ait.ac.th/ps5/data_model and current one is seem not same but still similar in many parts. In PS5, I see many unnecessary attribute such as: allow_comment, numver_of_views, and etc in “Event” and “Post” which can put in table “Section”. Furthermore, Event_Comment and Post_Comment should be only 1 table , no need to separate them.

Siraj : The following model have been implemented in the project..

1. User Authentication model (user)
2. Event Model (event)
3. Post Model (post)

The name of the description field in event, post and uer_registaraion table would be status.

Yemini : The events posted by SU should be made available to view in the homepage by the public.

2. Authenticate system

Peeranat : SU Portal authentication system seem okay but it would be better for user able to use their AIT account to login instead of create new one.

Siraj : I have visited the web10 site and found the SU portal on their main project. I using the authentication model to register my self as user. E-mail was sent to my email account for confirmation of my account. After confirmation i am able to visit the site as register user.

Yemini : i tried signing in using the username and password but couldnt sign in.

3. Design

Peeranat : Overall layout is not change much from default one that come out from Bootstrap... You need to redesign your own theme for your website. On “SU Portal” banner, when I hover on this banner, color seem difference then background and it just get darker. Try to change different color from current one.

Siraj : The design of the web site is simple. The main page contain the different sections including Academic, sport, complaint and suggestion. But i would like to see some information about the purpose of the project and the recent complain, event etc.

Yemini :

The design seems to be a default one from the active admin, could have made more beautiful and different.

4. Usability as proposed?

Peeranat : from proposed in <http://web10.cs.ait.ac.th/ps3> . Current SU Portal still need to integrate more features as proposed such as :

- Streamline the interaction between student union and students/staff.
- Facilitate student union to provide information about activities and events in the university.
 - need to implement activity section
- Facilitate student union to share past data.
- Facilitate the students/staff to register for events or activities using the application.
 - when create event, I don't see how student to participate event.
 - this feature should be able to look on calendar events per month/week/agenda

Siraj : I have register my self than able to see the information and enter the information about post and event. But as an ordinary user i would like to see some information about the event, complain and other sections. Second i want to edit, delete those information which i have enter or registered. Using this site i am able to delete the information or complain of other people as well. Third i would like to see the information on the main page in list form. I would strongly recommend that don't not mention my name when i register complain.

Yemini :
